

CAM CLEAT GRIPPER

VacuMove with cam cleat gripper

TH80 wire hoist with cam cleat gripper

Chain hoist with cam cleat gripper

The cam cleat gripper is a mechanical lifter that uses the weight of the goods to secure the grip. By pressing the hook upwards the operator opens the gripping pads. When the tool is moved upwards, the two pads are pulled together by the weight of the sack pulling downwards, thus creating a secure grip. For upwards motion the gripper can be combined with a variety of TAWI lifters: vacuum lifter, wire hoist or chain hoist. For more info contact sales@tawiusa.com
